

**ELEUTHERODACTYLUS NITIDUS** (NCN). MÉXICO: QUERÉTARO: municipality of Cadereyta de Montes, El Arbolito, Mesa de León. 1960 m. elev. 4 December 1991. Arturo González A., Juan Alfonso Delgadillo Espinosa, Carlos Camacho Alberto and Dionisio Saucedo Reséndiz. Museo de Zoología, Facultad de Ciencias, Universidad Nacional Autónoma de México (MZFC 6401, 3 specimens). Verified by John D. Lynch. First record for Querétaro, extending its range ca. 340 km N of Cuautla, Morelos (Dixon 1957, Texas J. Sci. 9:379–409) and partially fills a distributional gap of ca. 560 km between the Morelos record and another from Aguascalientes (McCranie and Wilson 1984, Herpetol. Rev. 15(1):22). Specimens were found under stones in an arid scrub vegetation in rocky soil near a temporary pond, which is similar to the collecting site near the Río San Juan as described by Dixon (*op. cit.*).
